

● STIMULATED GEOLOGIC HYDROGEN

Energy is
everywhere.

AI exploration intelligence for stimulated
geologic hydrogen.

- THE PROBLEM

2x

GLOBAL ENERGY DEMAND BY 2050

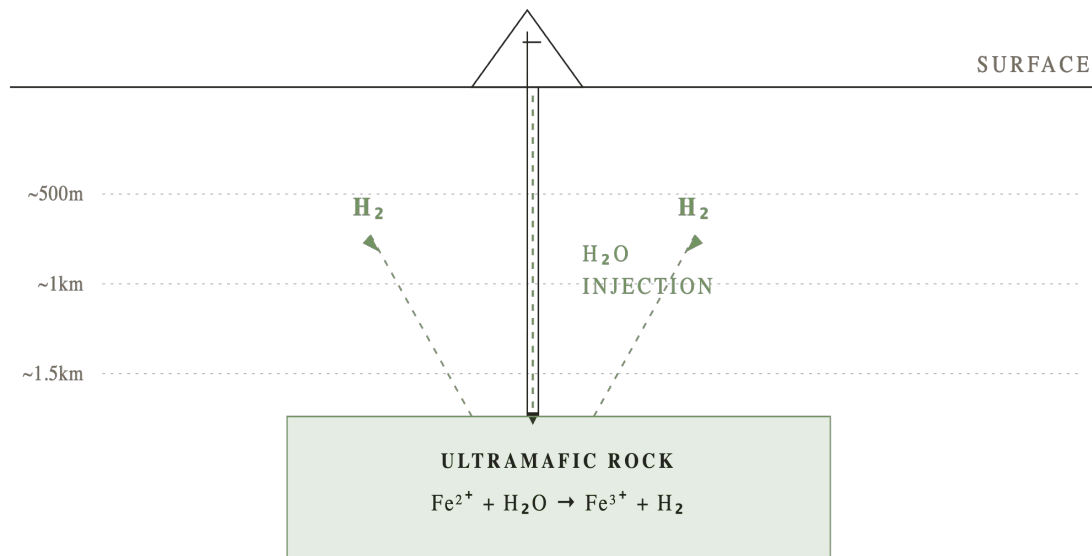

Demand is doubling. Clean alternatives can't keep up.

● CLEAN HYDROGEN AT SCALE

The answer has
been under our
feet for *4.6
billion years.*

Water meets iron-rich rock. The Earth has been making clean hydrogen continuously, beneath roughly a third of every continent.

CROSS-SECTION · SERPENTINIZATION REACTION SCHEMATIC

- PROOF IT'S REAL

98%

PURE HYDROGEN, PRODUCED BY THE EARTH, SINCE 2012

*A shepherd lit a cigarette over a water well in
1987. The well still powers a village today.*

● THE OPPORTUNITY

\$26T

CLEAN ENERGY MARKET BY 2050 • IEA

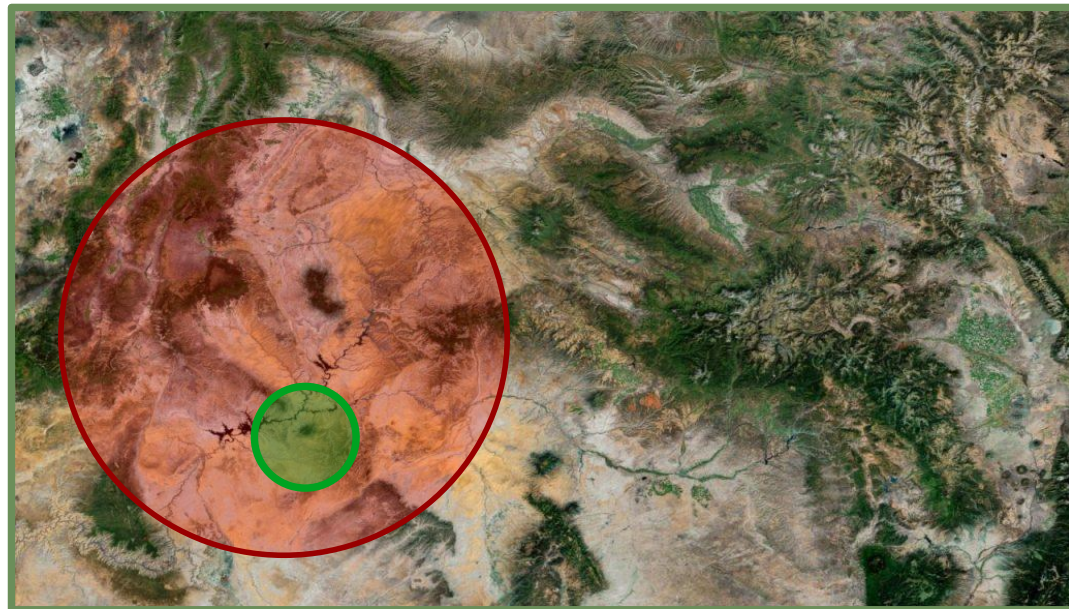

Stimulated
hydrogen can
replace *30 to 50%*
of the world's dirty
energy.

● THE GAP

The chemistry works.
The bottleneck is discovery.

● Rock that is usable

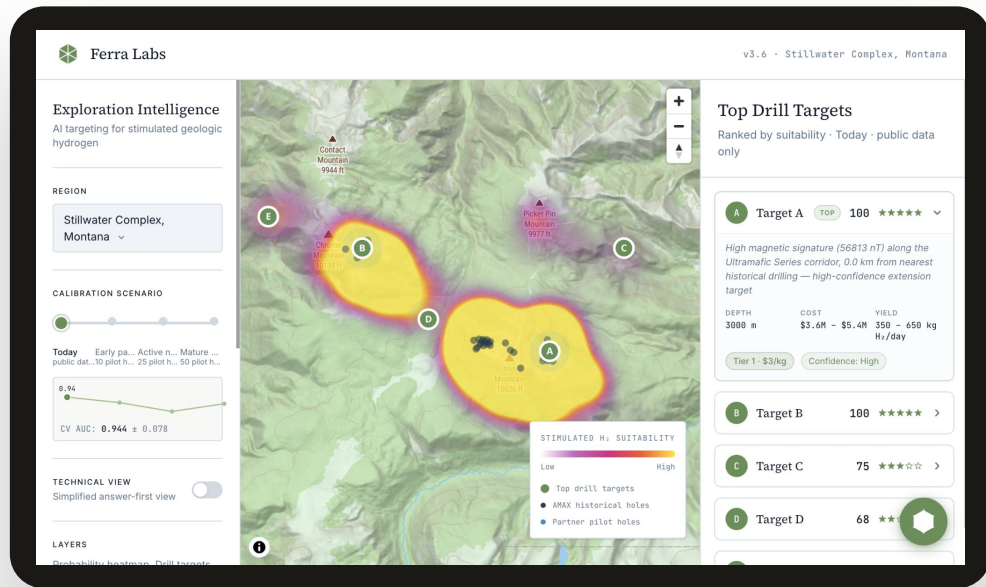

● Current resolution

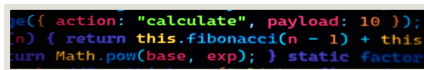

● INTRODUCING FERRA LABS

AI exploration intelligence for stimulated geologic *hydrogen*.

We tell operators exactly where to drill, with quantified confidence, so capital flows and the industry becomes investable.

Multi-resolution sparse data

ASTER, EMIT, USGS aeromagnetics, well logs, soil gas, IP surveys — at native resolution.

Geological intelligence

Domain knowledge encoded as features — Fe^{2+} availability, fault density, microbiome risk.

Physics-informed hybrid model

CNN + GNN + Bayesian fusion. Hard constraints from chemistry baked into the loss function.

PACKAGE

Drill target intelligence

A structured decision document per site, with honest CIs. What an operator hands a VC.

CALIBRATE

Continuous calibration

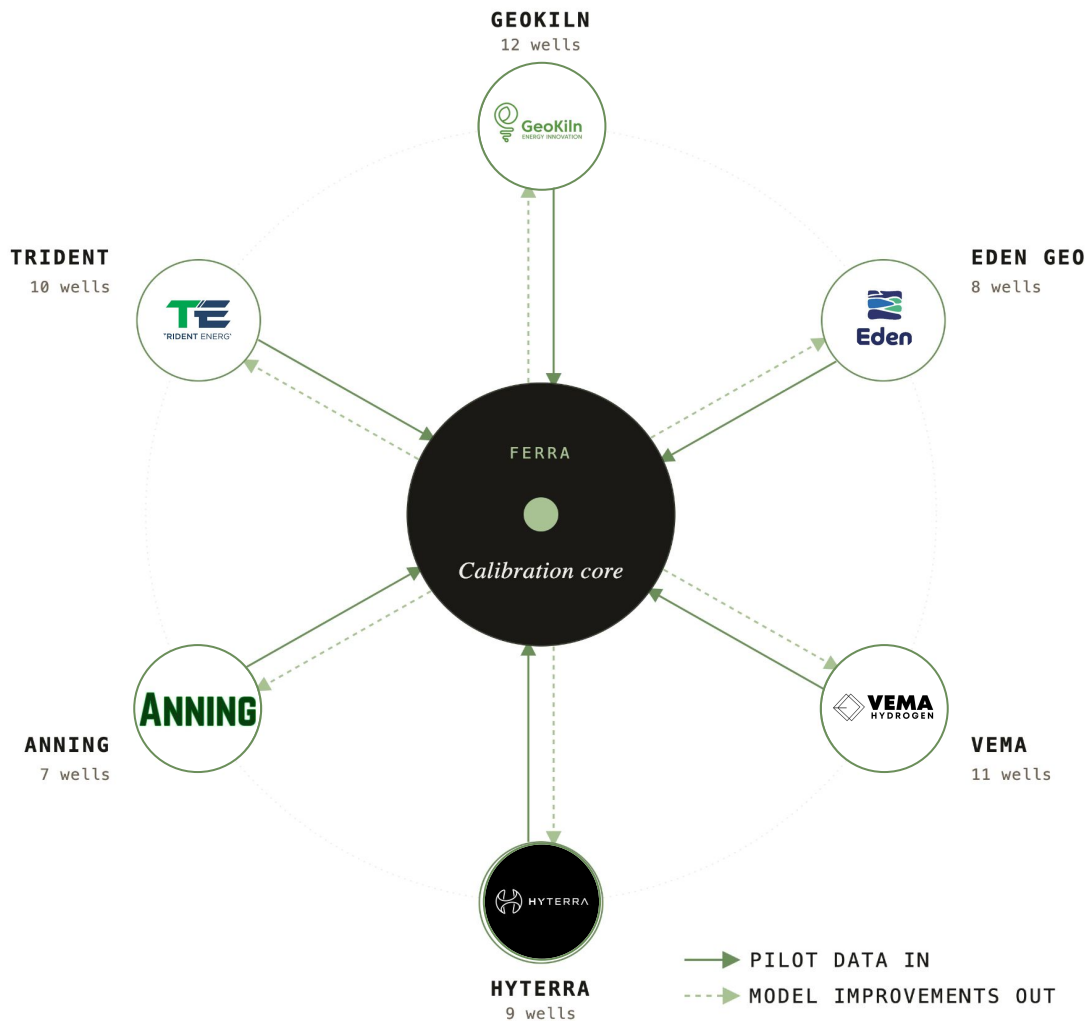

Every drill result anywhere makes the model smarter. The moat compounds.

THE 5 LAYER SYSTEM

From *raw signal* to a drill target intelligence package.

Every drill result *anywhere*
makes our model smarter.

Operators license drill target packages. We
acquire calibration data as a byproduct.

Operators told us what they need. *It's exactly what we build.*

“

[Ferra Labs] *would speed the process by years* and give me greater confidence in getting funding.

“

[Ferra Labs] would *give more confidence* in where you're choosing to drill. I can see AI being really helpful there."

“

AI ranking drill targets would give more confidence in where you're choosing to drill.

EDEN GEOPOWER

From site services to a *foundational data layer*, reaching *\$200M by 2032*

REVENUE MODEL

Year 1-2

Drill target packages

\$50K-\$250K each • 70-90% gross margin

Year 3-5

Platform subscriptions + services

\$500K-\$2M ARR per operator

Year 5+

Foundational data layer fees

0.5-2% of H₂ revenue per validated site
Adjacent verticals

YEAR

ESTIMATED REVENUE

2026

\$94K

2027

\$500K

2028

\$1.3M

2029

\$4M-\$6.6M

2032

\$200M company

YEAR	MILESTONE	Customer
2026	Foundation — pipeline live, 1-2 partner sites surveyed	1 operator
2027	First predictions delivered · HyTerra Q4 2026 calibration event	2–3 operators
2028	Validation loop active · first subscriptions · \$800K–\$1.3M ARR	4–6 operators
2029	Credibility — 6–8 sites validated, due-diligence layer for investors	8–12 operators
2032	Foundational data layer — the industry runs on top of us	25–40 operators

- THE VISION

We will be the foundational data layer uncorking a **\$26T** energy market.

Bringing the *next generation of clean energy* to the globe.
